3. The following is an examiner's statement of reasons for allowance.

The prior art of record fails to teach or suggest three dimensional image segmentation comprises (a) automatically determining which images of the plurality of two-dimensional images have insufficient feature information for the structure of interest, manually drawing attractors in the form of at least a partial contour of the structure of interest in the two-dimensional images of the plurality of two-dimensional images with insufficient feature information and with a computer, segmenting the structure of interest with a three-dimensional segmentation process using the attractors and the compiler segmented contours of the plurality of two-dimensional images in combination into other features and elements of claims 1 and 13; (b) an image processor for segmenting a three-dimensional structure of interest which is contained insufficient feature information for the structure of interest and acquiring attractors manually indicated by a user, wherein the attractors have the form of at least

a partial contour of the structure of interest in the images of the plurality of two-dimensional images in combination into other features and elements of claim 7; (c) an image processor which separating the plurality of two-dimensional images into a first set of images that is automatically segmentable using the two-dimensional segmentation algorithm and a second set of two-dimensional images that are non-automatically segmentable using the two-dimensional segmentation algorithm due to insufficient boundary designation in a structure of interest in each image in the second set of images and with the three-dimensional segmentation algorithm, automatically segmenting the structure of interest in three-dimensions based on the boundaries designated in the first set of two-dimensional images and the modified second set of two-dimensional images in combination into other features and elements of claim 17.
